Pancha Tattva Yoga Retreat and Healing Center

I developed a custom WordPress theme based on the Twenty Twenty-Four child theme, fully leveraging Full Site Editing (FSE) capabilities and dynamic content functionality. I also designed and developed a custom Packages page that allows customers to easily view pricing and package details. The entire UI/UX and visual design were created from scratch.

Tools by Mohan Khadka

I created a tool that reduces various frontend development tasks, helping to unlock greater creativity and efficiency.

Online Market & Freelance

I have sold various CSS projects online, and I also do freelance work.

Get It Services

In this project, I had the opportunity to work on three platforms: website, web application, and hybrid mobile apps (Android & iOS). The website design was a mix of my own ideas and client-provided designs, which I converted from PSD.

Kalakarita

I worked with minimal/material design guidelines. This was my first news website built with WordPress. It became a trending entertainment site. The project took about one and a half months to complete and is now running smoothly without issues.

Index Furniture Nepal

The website was built on Magento, one of the most popular platforms. It follows a flat design approach. This was my third project using Magento. It took about one and a half months to complete and is now running smoothly.

The North Face

Our company developed a web-based and mobile application to manage stock and sales. In this project, I was responsible for UI/UX design for both the mobile apps and website. The mobile app was built using Framework7, and the web application used Bootstrap 3.

Solutions Consultant

This was my second WordPress theme design for Solutions Consultant. I made it fully responsive and integrated a custom Google Map.

Exolutus

Exolutus is a company that provides software development services and IT solutions. This website was built using WordPress and designed to be simple and fully responsive.

QFX Cinemas

I had the opportunity to work on QFX Cinemas. In this project, I converted the design provided by the client into a functional website and mobile application.

MARS

Municipal Administration & Revenue System (MARS) was my first government project. It is a web-based application. In this project, I designed the entire user interface using Bootstrap, LESS, and the MVC .NET platform.

Dish Home

In this project, I converted PSD designs provided by the client into a working website. I used Bootstrap and FontAwesome libraries, and DNN (DotNetNuke) as the CMS. The website has since been updated.
